

## Evaluate

While building my monument I had to make some changes with the final design I had originally planned. I found out that clay wasn't the best material to use as the roof for my monument. When the clay hardened it started to crack and fall apart. I didn't want to risk having the roof collapsing prior to my presentation so I decided to remove the clay roof and replace it with some cardstock paper. I then painted the cardstock paper to match the color of the clay I had previously used.

For the most part I felt that I organized my time rather well. As you can see with my timeline I spaced out my work evenly during the past 5 weeks. I didn't want to feel rush in the building process so I made sure that I did a little bit of building each week. Thankfully I noticed the cracking of the clay roof a week before the project was due which gave me plenty of time to make the necessary changes.

I enjoyed working on my monument. It helped that I visited it last summer so I had a good grasp of what it looked like before I started my design process. Other than replacing the roof I found that I had no real difficulty creating this small scale replica. I would have liked it better if our specifications were larger than the 18 cm x 22 cm x 20 cm, but I still think my replica came out looking great.

However, I had some difficulty in creating my PowerPoint. I had trouble finding a design and font that I liked enough to use for my presentation. I made sure to create a good balance of text and pictures. It was somewhat difficult to memorize the key bits of information, but I know it's necessary if I want to avoid reading off my PowerPoint during my presentation.

Overall I think I deserve a good grade as I put a lot of effort in building my monument and creating my PowerPoint presentation.
