## Evaporation

- Heat energy from the sun causes water in puddles, streams, rivers, seas or lakes to change from a liquid to a water vapor.
- This is called evaporation.
- The vapor rises into the air and collects in clouds.

# Condensation

- Water vapor collects in clouds. As the clouds cool the water vapor condenses into water drops.
- This is called **condensation**.
- These drops fall to the earth as rain, snow or hail.

### Precipitation

Water falls to the earth from clouds. Mainly as rain, but sometimes as snow and hail.
This is called precipitation.

## Transpiration

- Transpiration is the process by which plants lose water out of their leaves.
- Transpiration gives evaporation a bit of a hand in getting the water vapor back up into the air.
